Head Lice are helpless in our hands!

Lice Control- The Parents Choice...Naturally

Since 2001, Lice Control has been providing salon services that specialize in head lice removal and offering products to eradicate or prevent head lice. Our highly trained technicians have treated thousands of people of the annoying parasite.

All treatments are non-toxic, clinically tested and 100% Guaranteed!

Our Approach- Our Heat Treatment Device

This FDA cleared device, also known as the AirAlle', has been a tremendous breakthrough for professional service providers as it allows us to make 1-time treatments with no further treatments necessary. Take a look at the manufacturer's information on the device enclosed in the folder.

Step 1 Heat Treatment

The temperature of the heat and flow of air is less than a blow dryer, this allows us to keep the placement of the patent applicator tip on the head for 30 seconds and continue a pattern around the head for 30 minutes or less.

Step 2 Manual Comb-Out

Removing the eggs and lice from children can be daunting. Especially working with children. We use the best comb on the market and a special non-toxic solution that allows us to provide a tangle-free experience that prevents tears from the little ones.

Step 3 Oil Application

We use pure Dimethicone that is proven to kill lice and is only left on the hair for 20 minutes. This final step is our safety net to cover unforeseen circumstances that may occur during the process

And That's It!

100% Guaranteed

Treatment and combing take about 60 minutes and many times it can be covered by a health savings account. We also can provide them all the forms so they may file a claim against their PPO health insurance.
